Computer forensics (also known as computer forensic science) is a branch of digital forensic science pertaining to evidence found in computers and digital storage media. The goal of computer forensics is to examine digital media in a forensically sound manner with the aim of identifying, preserving, recovering, analyzing and presenting facts and opinions about the digital information.

### **Computer forensics - Wikipedia**

[1] This document goes on to describe that a forensics report must thoroughly detail the steps taken, what tools were used, how the analysis was done, etc. Another SANS paper on the topic of forensics reporting stresses that all the details of the investigation must be in the report, going so far as to state "Finally, create and record the MD5 hashes of the evidence as well as record and ...

A digital forensic investigation commonly consists of 3 stages: acquisition or imaging of exhibits, analysis, and reporting. Ideally acquisition involves capturing an image of the computer's volatile memory (RAM) and creating an exact sector level duplicate (or "forensic duplicate") of the media, often using a write blocking device to prevent modification of the original.
