Radio Data System (RDS) is a communications protocol standard for embedding small amounts of digital information in conventional FM radio broadcasts. RDS standardizes several types of information transmitted, including time, station identification and program information.. The standard began as a project of the European Broadcasting Union (EBU), but has since become an international standard of ...

Radio Data System - Wikipedia

The P332 RDS Encoder is especially developed for regional and national stations but can suit for other stations as well. Depending on technical requirements, it may be used as an economical alternative to industry standard RDS encoders.

P332 RDS Encoder - pira.cz

The RDS Spy allows analyzing the RDS data and adjusting all RDS services before final installation of the encoder. In most cases, you don't need any special hardware, just a standard PC.

Expo Motorcars

A radio clock or radio-controlled clock (RCC) is a clock that is automatically synchronized by a time code transmitted by a radio transmitter connected to a time standard such as an atomic clock. Such a clock may be synchronized to the time sent by a single transmitter, such as many national or regional time transmitters, or may use multiple transmitters, like the Global Positioning System.
