Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

Question: "What is theistic evolution?" Answer: Theistic evolution is one of three major origin-of-life worldviews, the other two being atheistic evolution (also commonly known as Darwinian evolution and naturalistic evolution) and special creation. Versions of theistic evolution come somewhere between one of two extremes. One view is close to deism, which says God allows only natural ...

A binary star is a star system consisting of two stars orbiting around their common barycenter. Systems of two or more stars are called multiple star systems. These systems, especially when more distant, often appear to the unaided eye as a single point of light, and are then revealed as multiple by other means.
