Getting Started - Excel ExposureExcel Exposure

A spreadsheet is an interactive computer application for organization, analysis and storage of data in tabular form. Spreadsheets developed as computerized analogs of paper accounting worksheets. The program operates on data entered in cells of a table. Each cell may contain either numeric or text data, or the results of formulas that automatically calculate and display a value based on the ...

Spreadsheet - Wikipedia

5 rows × 25 columns. Excel files quite often have multiple sheets and the ability to read a specific sheet or all of them is very important. To make this easy, the pandas read_excel method takes an argument called sheetname that tells pandas which sheet to read in the data from. For this, you can either use the sheet name or the sheet number.

Using Excel with pandas - Dataquest

The Pivot Table will always pull the unfiltered data for its source. You can cheat a bit by creating a Table from your Source sheet. Then as you add columns to your Pivot, they should bring the Table filtering that you've already done with them.
