Extreme Papers Biology Paper One

Xenology is the study of all aspects of life, intelligence, and civilization indigenous to environments other than Earth. Over the last three decades xenology has advanced rapidly on many fronts. Biochemists have studied the origin of life on this planet, knowing that if they can duplicate the major early steps of "abiogenesis" in the laboratory then the evolution of alien life is a very ...

Note: This essay was originally published in 1928 (long before computer networks were invented :-)) and discussed size in the natural (biological) world and systems. As you read it, think about whether there is a "right size" for a network (or a piece of a network such as an Autonomous System), and what aspects of a network determine the "right size."

The history of molecular biology begins in the 1930s with the convergence of various, previously distinct biological and physical disciplines: biochemistry, genetics, microbiology, virology and physics. With the hope of understanding life at its most fundamental level, numerous physicists and chemists also took an interest in what would become molecular biology.
