2.1.5 Analytics Node. Figure 7 below shows the internal structure of an analytics node. An analytics node communicates with applications using a north-bound REST API, communicates with other analytics nodes using a distributed synchronization mechanism, and with components in control and configuration nodes using an XML-based protocol called Sandesh designed specifically for handling high ...

The UI components are built on a solid HTML foundation, progressively enhanced to provide core experiences across browsers. All users will have access to the same critical information and experiences regardless of what browser they use, although those experiences will render better in newer browsers. If JavaScript fails, users will still get a robust HTML foundation.

If a session loads a PL/SQL package into memory, then the UGA contains the package state, which is the set of values stored in all the package variables at a specific time. The package state changes when a package subprogram changes the variables. By default, the package variables are unique to and persist for the life of the session.

The multitenant architecture enables an Oracle database to function as a multitenant container database (CDB).. A CDB includes zero, one, or many customer-created pluggable databases (PDBs). A PDB is a portable collection of schemas, schema objects, and nonschema objects that appears to an Oracle Net client as a non-CDB. All Oracle databases before Oracle Database 12c were non-CDBs.

As an industry, we do have the Unified Modeling Language (UML), ArchiMate and SysML, but asking whether these provide an effective way to communicate software architecture is often irrelevant because many teams have already thrown them out in favour of much simpler "boxes and lines" diagrams.
