Clarendon Medical - Welcome

The reticulocyte production index (RPI), also called a corrected reticulocyte count (CRC), is a calculated value used in the diagnosis of anemia. This calculation is necessary because the raw reticulocyte count is misleading in anemic patients. The problem arises because the reticulocyte count is not really a count but rather a percentage: it reports the number of reticulocytes as a percentage ...

Reticulocyte production index - Wikipedia

The peripheral blood film (PBF) is a laboratory work-up that involves cytology of peripheral blood cells smeared on a slide. As basic as it is, PBF is invaluable in the characterization of various clinical diseases. This article highlights the basic

Granulocytes are a category of white blood cells characterized by the presence of granules in their cytoplasm. They are also called polymorphonuclear leukocytes or polymorphonuclear neutrophils (PMN, PML, or PMNL) because of the varying shapes of the nucleus, which is usually lobed into three segments. This distinguishes them from the mononuclear agranulocytes.

Granulocyte - Wikipedia

Global Engage is pleased to announce its digital pathology congress will return to London for its 6 th year on 5-6 December 2019. As the leading conference in our digital pathology series, which will include meetings in Tokyo and New York in 2019, last year's sold out meeting attracted over 420 attendees and 35 exhibitors.

Digital Pathology & AI Congress - Global Engage

When damage to small blood vessels and capillaries occurs, the body controls blood loss via physiological processes referred to as hemostasis. In vivo, hemostasis depends on an interaction between the plasma-based coagulation cascade, platelets, and the endothelium of blood vessels. In the clinical laboratory, in vitro analytical assays are capable of measuring only the first two components ...
