The first step is to compute the required strength, P u, using ASCE 7 load combinations for LRFD.In this case, it is equal to 1.2 times the dead load plus 1.6 times the live load. The second step is to calculate the required bearing area, A 1, per AISC Equation J8-2. The third step is to check if the required bearing area is greater than or equal to the projected area of the column.

Abstract. Polymer flooding has been widely applied through past decades to increase oil recovery after waterflood. Water-soluble polymers are used to increase the viscosity of injected water that is a requirement for better sweep efficiency, but accelerated production due to polymer flooding may be limited by reduced injectivity.
