Prentice Hall Biology, Chapter 16 Evolution of Populations. 16-1 Genes and Variation 16-2 Evolution as Genetic Change 16-3 The Process of Speciation. gene pool.

# Chapter 16 Evolution of Populations Flashcards | Quizlet

Chapter 16: Evolution of Populations. 16.1 Genes and Variation. 16.2 Evolution as Genetic Change. 16.3 The Process of Speciation. Evolutionary thought today is tightly linked to genetics. Remember, populations, not individuals evolve. All the alleles in a pop. added together are called the gene pool.

# **Chapter 16: Evolution of Populations**

chapter 16 evolution of populations Flashcards. trait controlled by a single gene that has two alleles. trait controlled by two or more genes. all of the genes (and alleles) present in a population.

# chapter 16 evolution of populations Flashcards and Study ...

form of reproductive isolation in which two populations have differences in courtship rituals or other types of behavior that prevent them from interbreeding. behavioral isolation form of reproductive isolation in which two populations are separated physically by geographic barriers such as rivers, mountains, or stretches of water.

### Chapter 16: Evolution Of Populations Flashcards by ProProfs

Chapter 16 Evolution of Populations. 16–1 Genes and Variation. Darwin's original ideas can now be under- stood in genetic terms. Beginning with variation, we now know that traits are con- trolled by genes and that many genes have at least two forms, or alleles.

# **Chapter 16 Evolution of Populations Summary**

Evolution Versus Genetic Equilibrium. Five conditions are needed for a population to be in . genetic equilibrium. 1. random mating. 2. large population size. 3. no migration. 4. no mutations. 5. no natural selection. If all five conditions are met, relative allele frequencies will not change. Evolution will not occur.
